Visual Specifications

Callouts are used inside the containers at L, M, S in order to group content together. At the XS screen size the callout is removed in order to save horizontal space. However, there are

instances where a callout may still be needed at XS in order to group critical information together. For example, complex forms sometimes require a callout to persist at XS in order to help the user understand the page heirarchy.

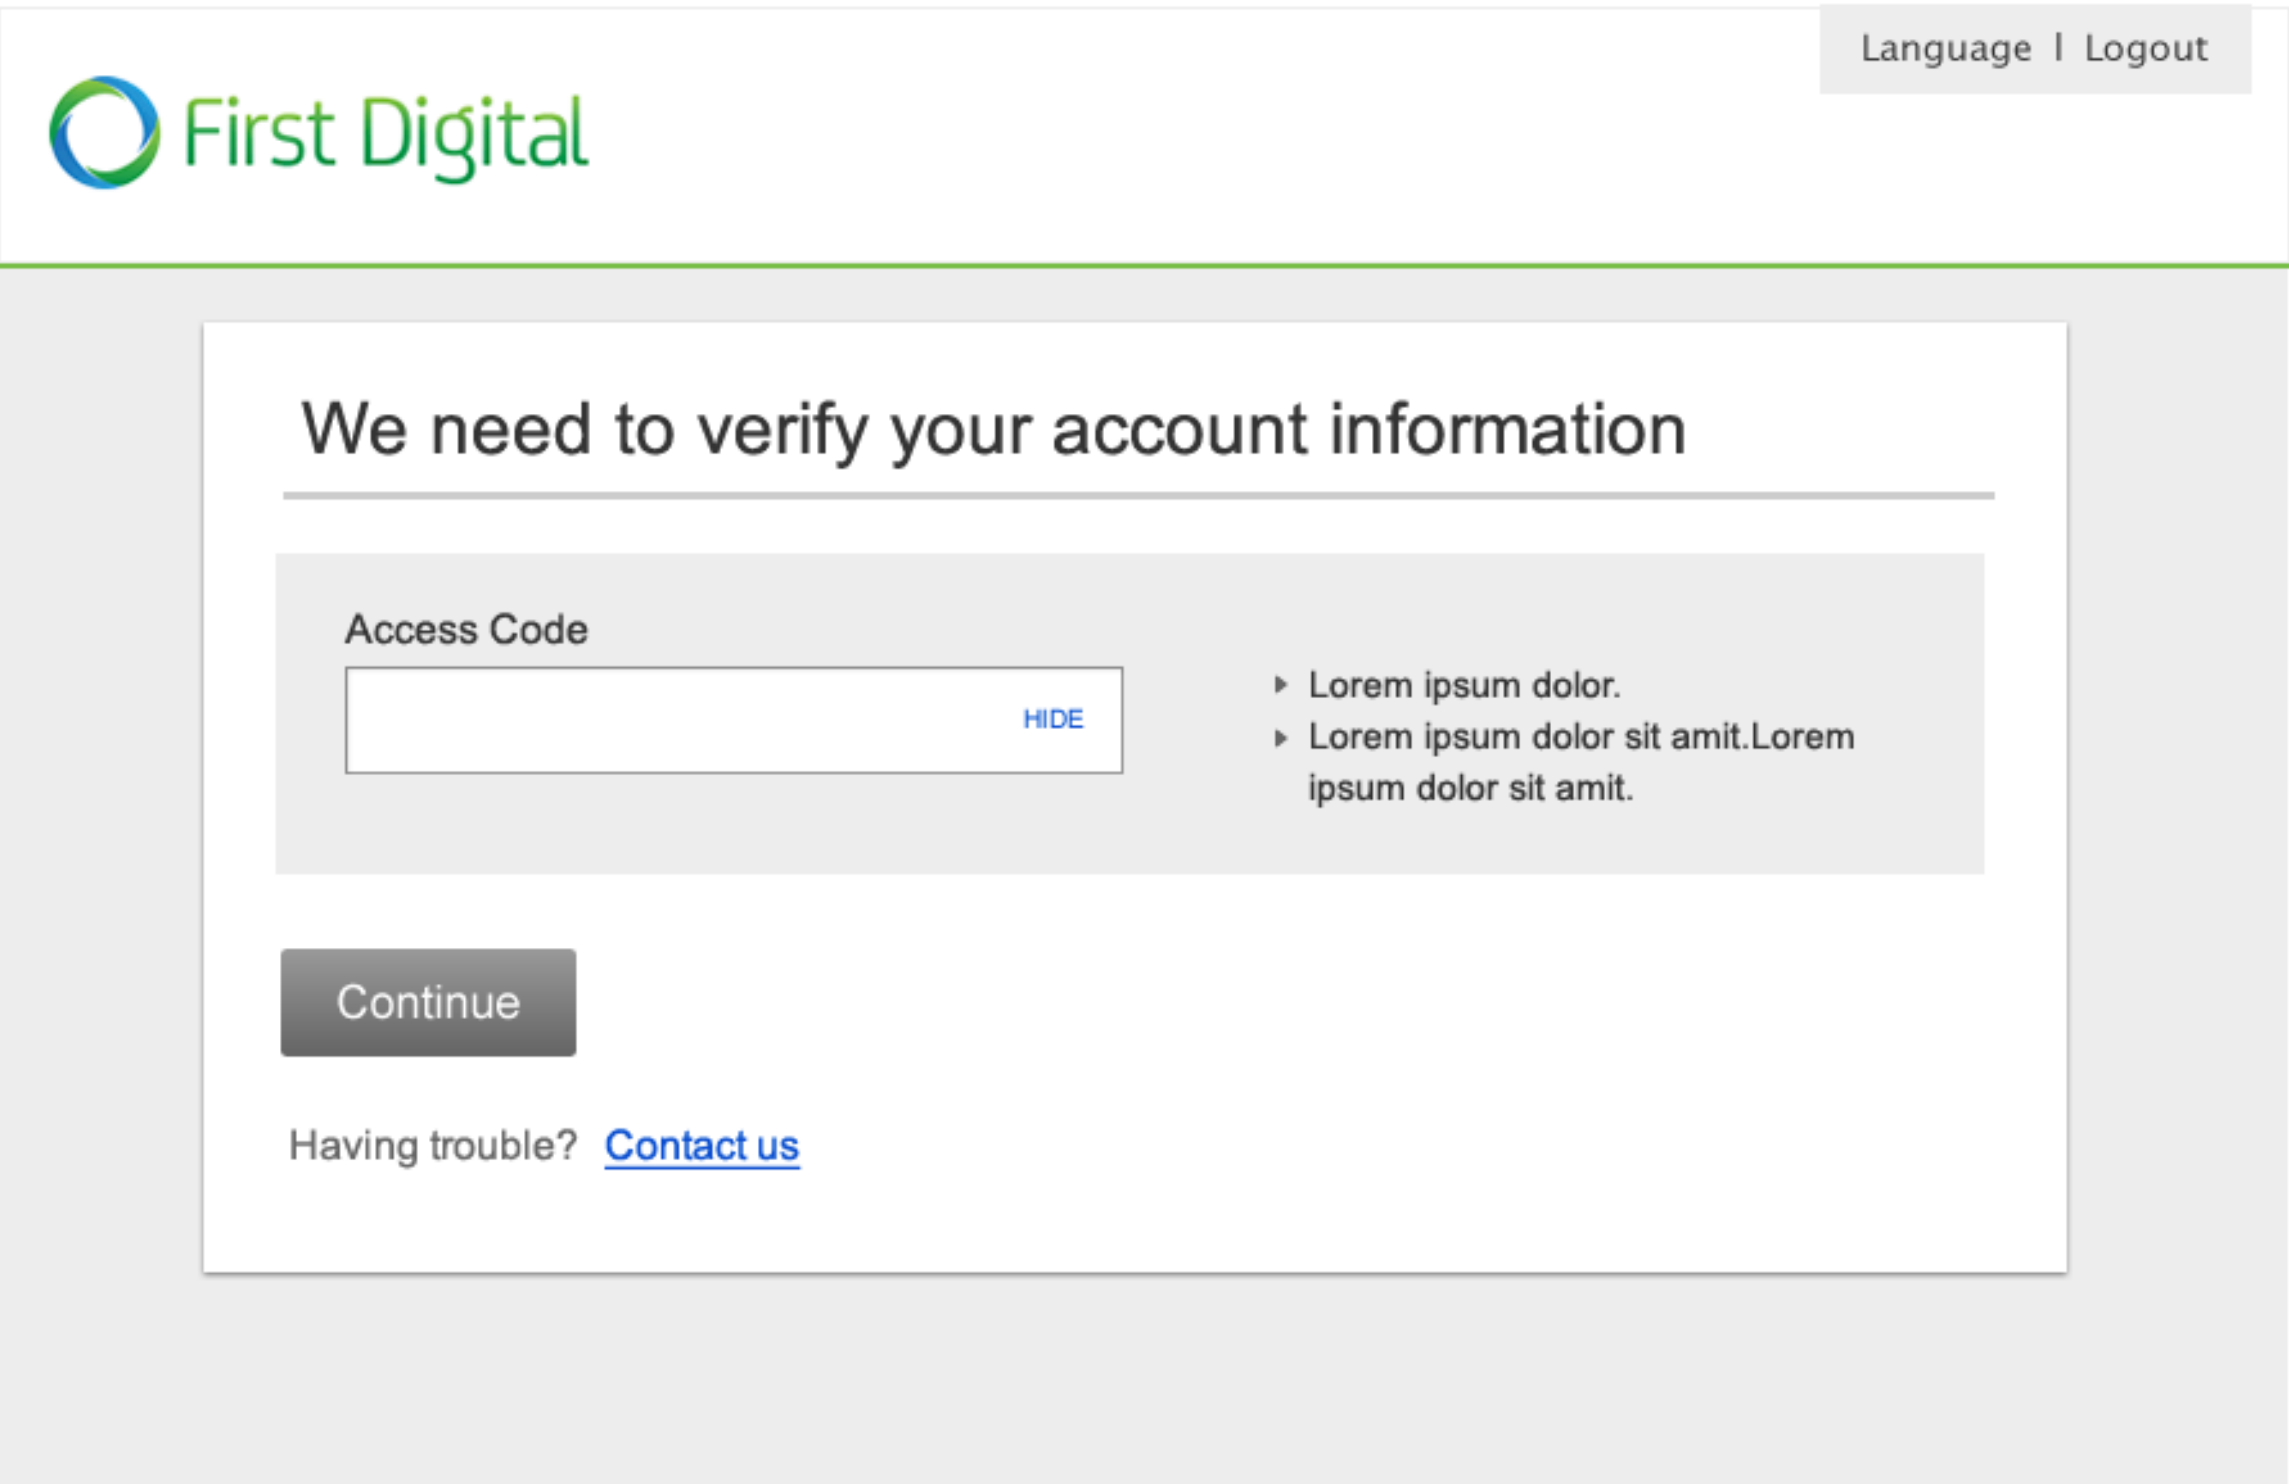

Screen size	Padding (Top, Right, Bottom, Left) from the edge of the container to the content.
Large	30 px, 30px, 30px, 30px
Medium	30 px, 30px, 30px, 30px
Small	20 px, 20px, 20px, 20px
XSmall	20 px, 20px, 20px, 20px *if there is a callout on XS (not default behavior)

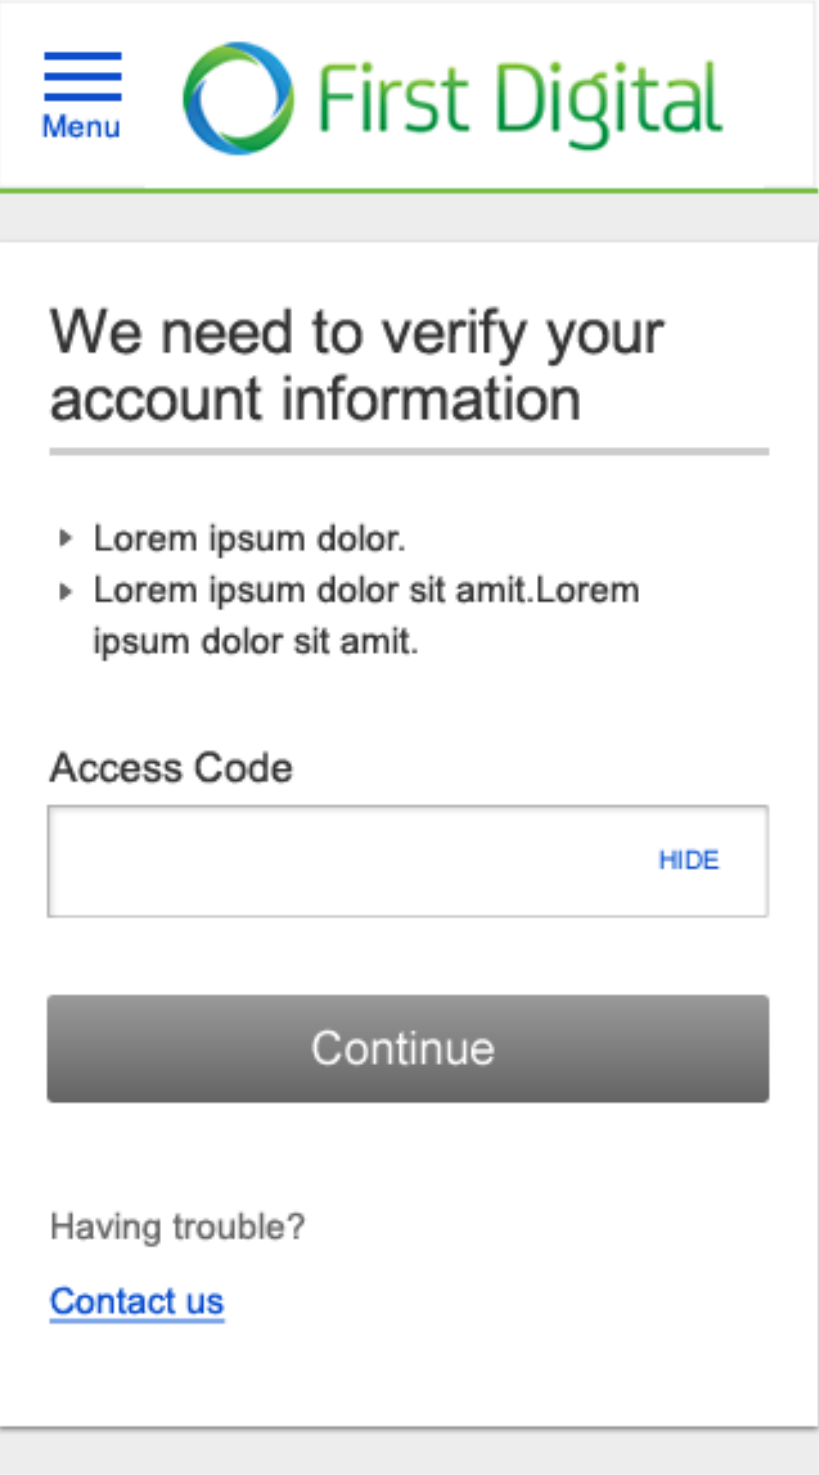

Examples

Simple form

L, M, S

XS

Overlay
