

## Structure

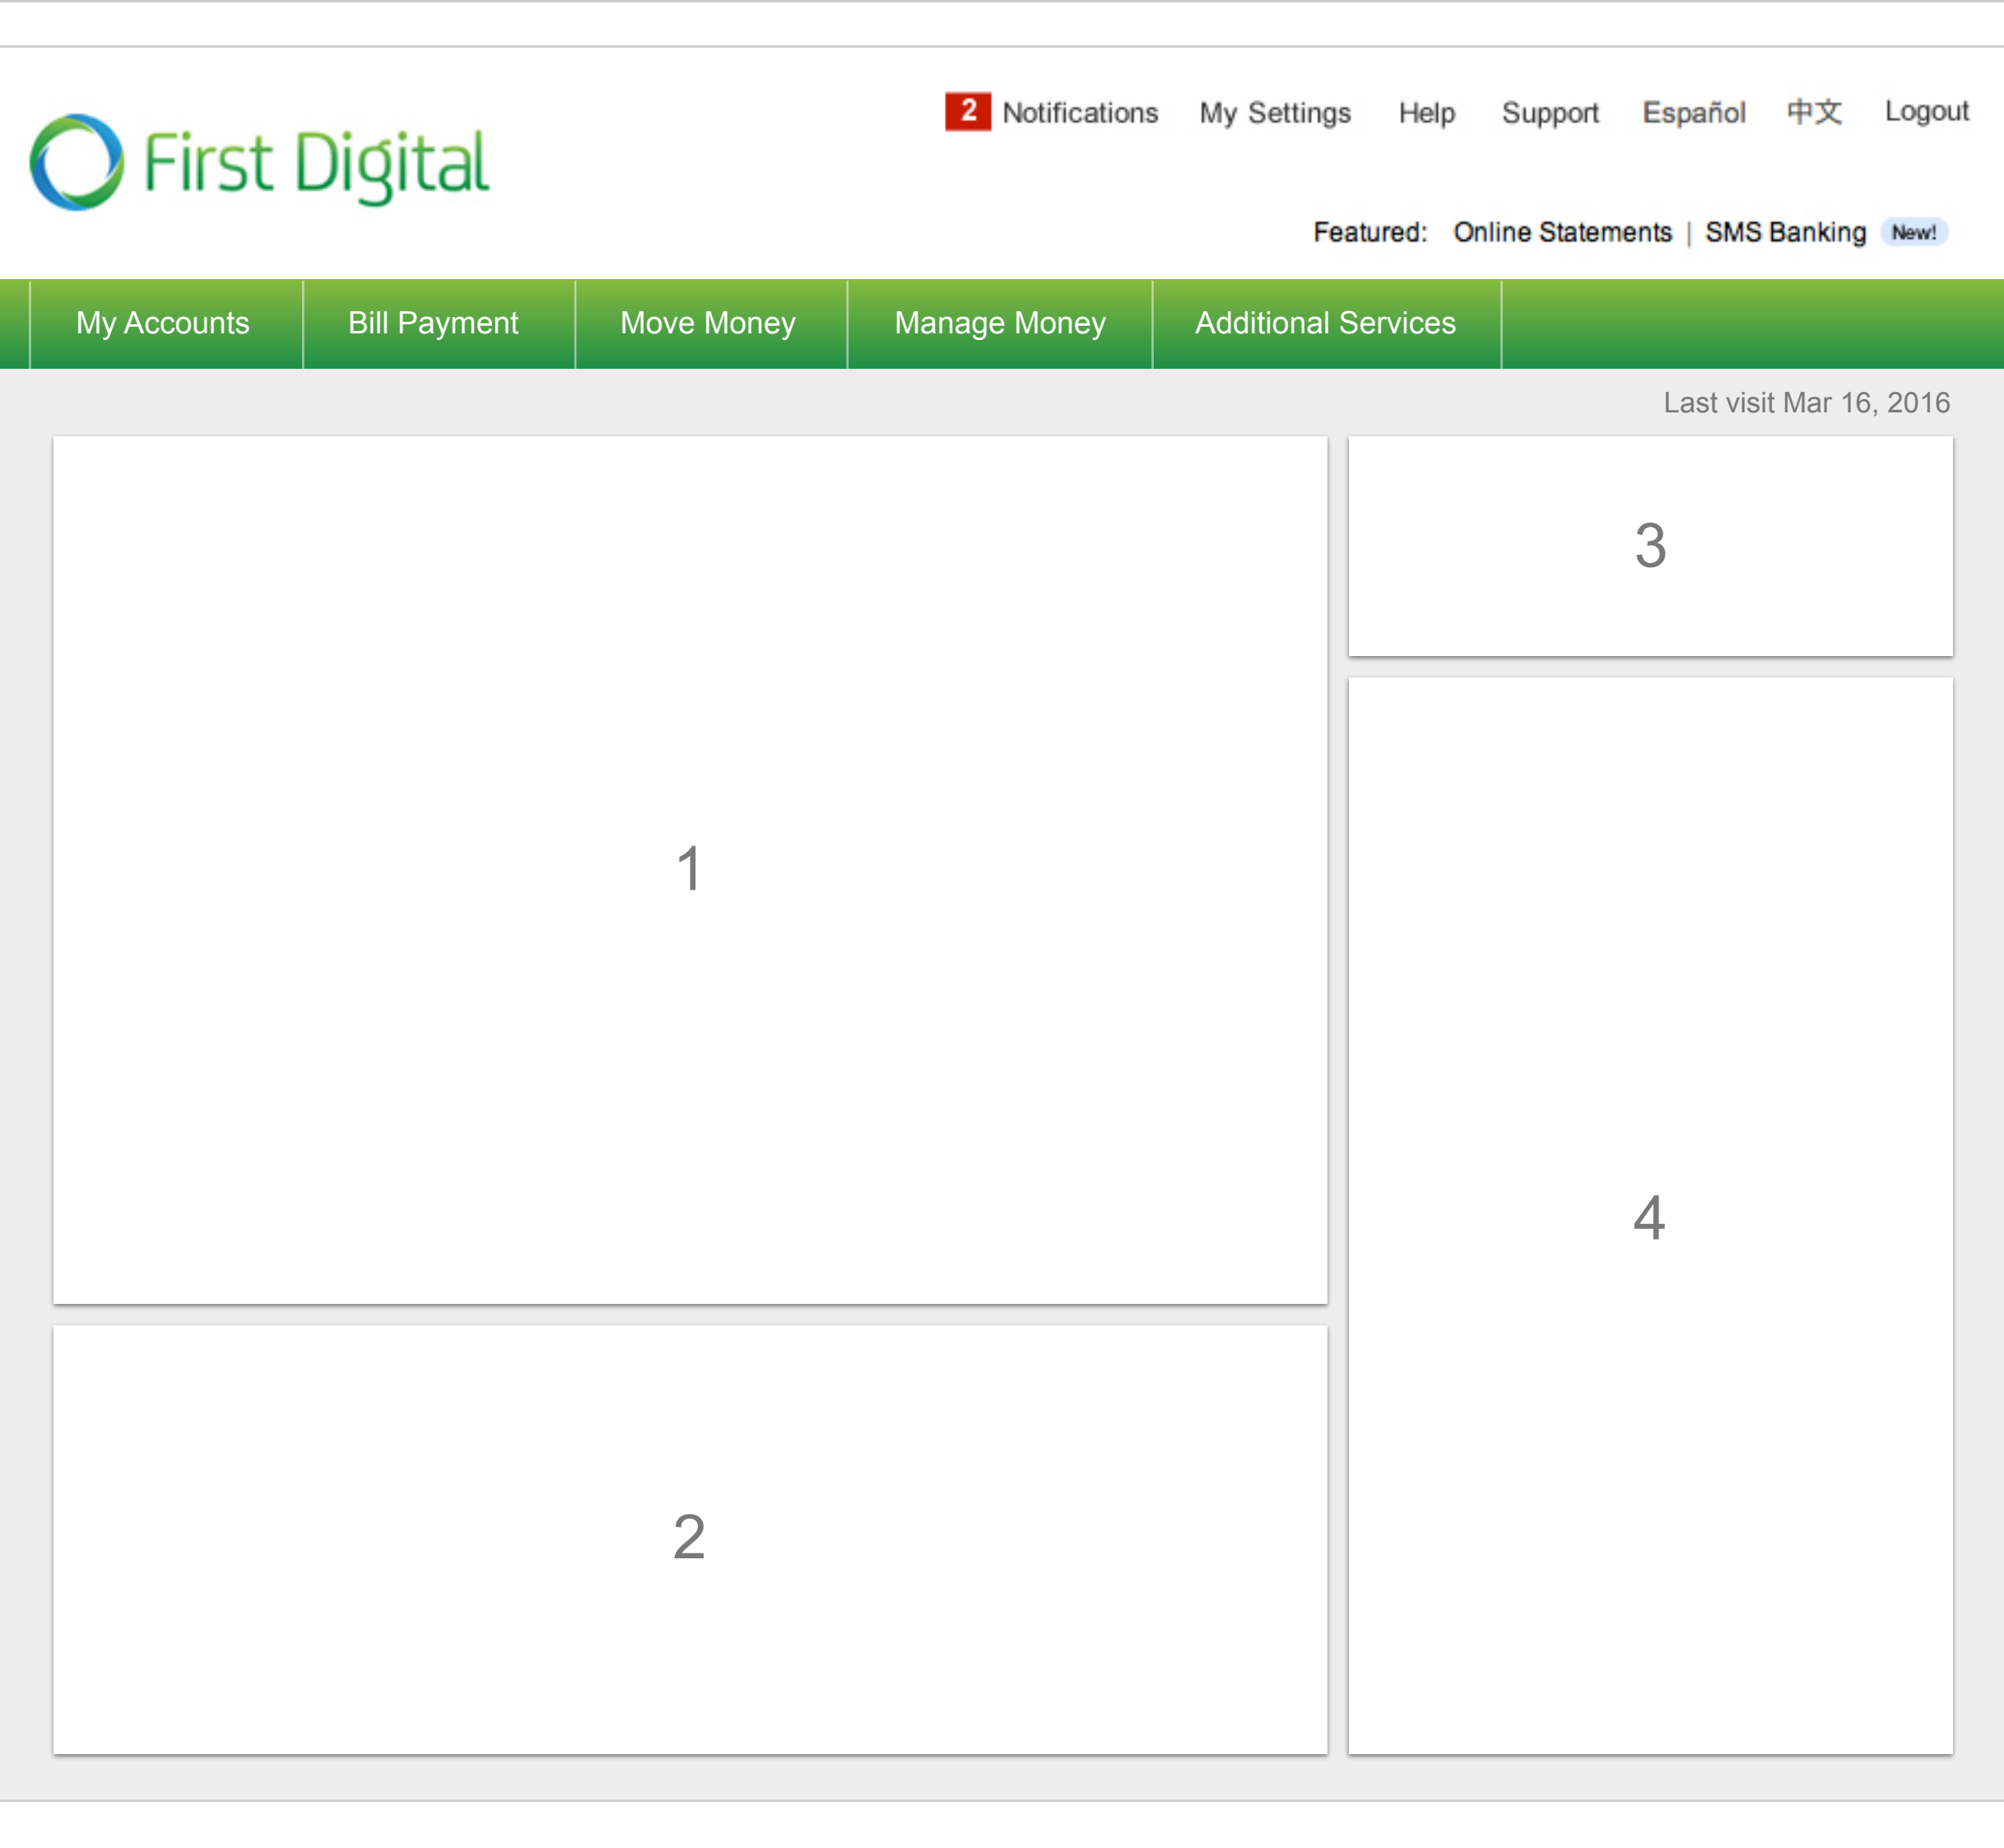

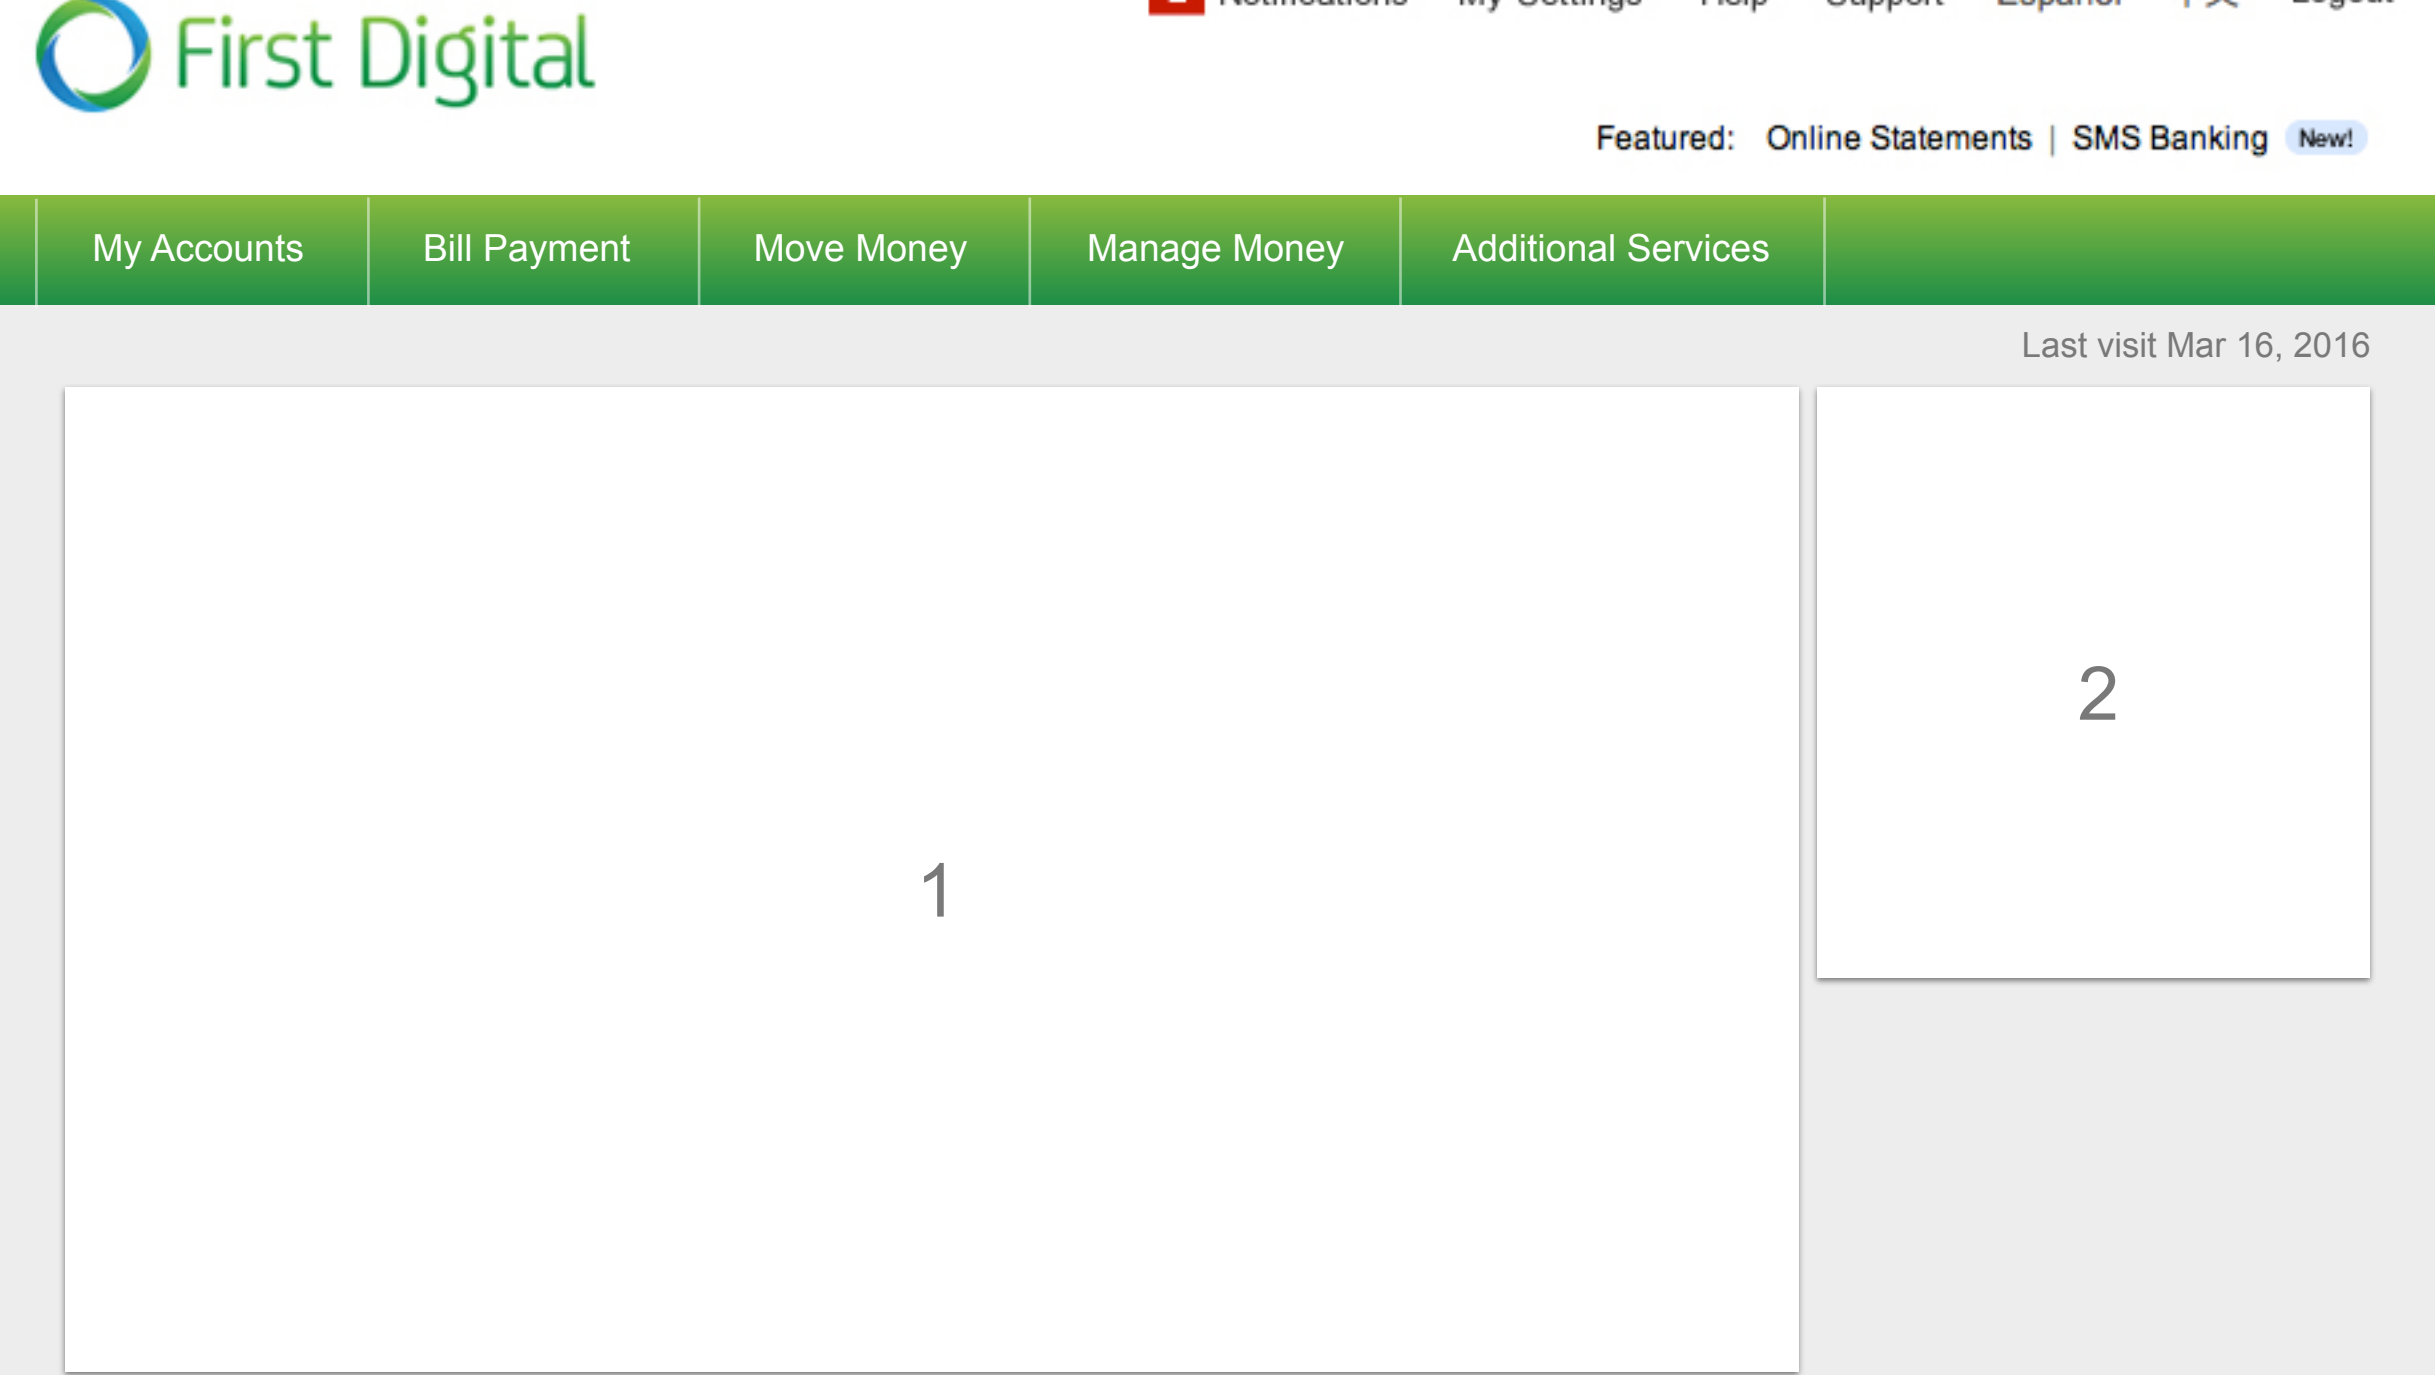

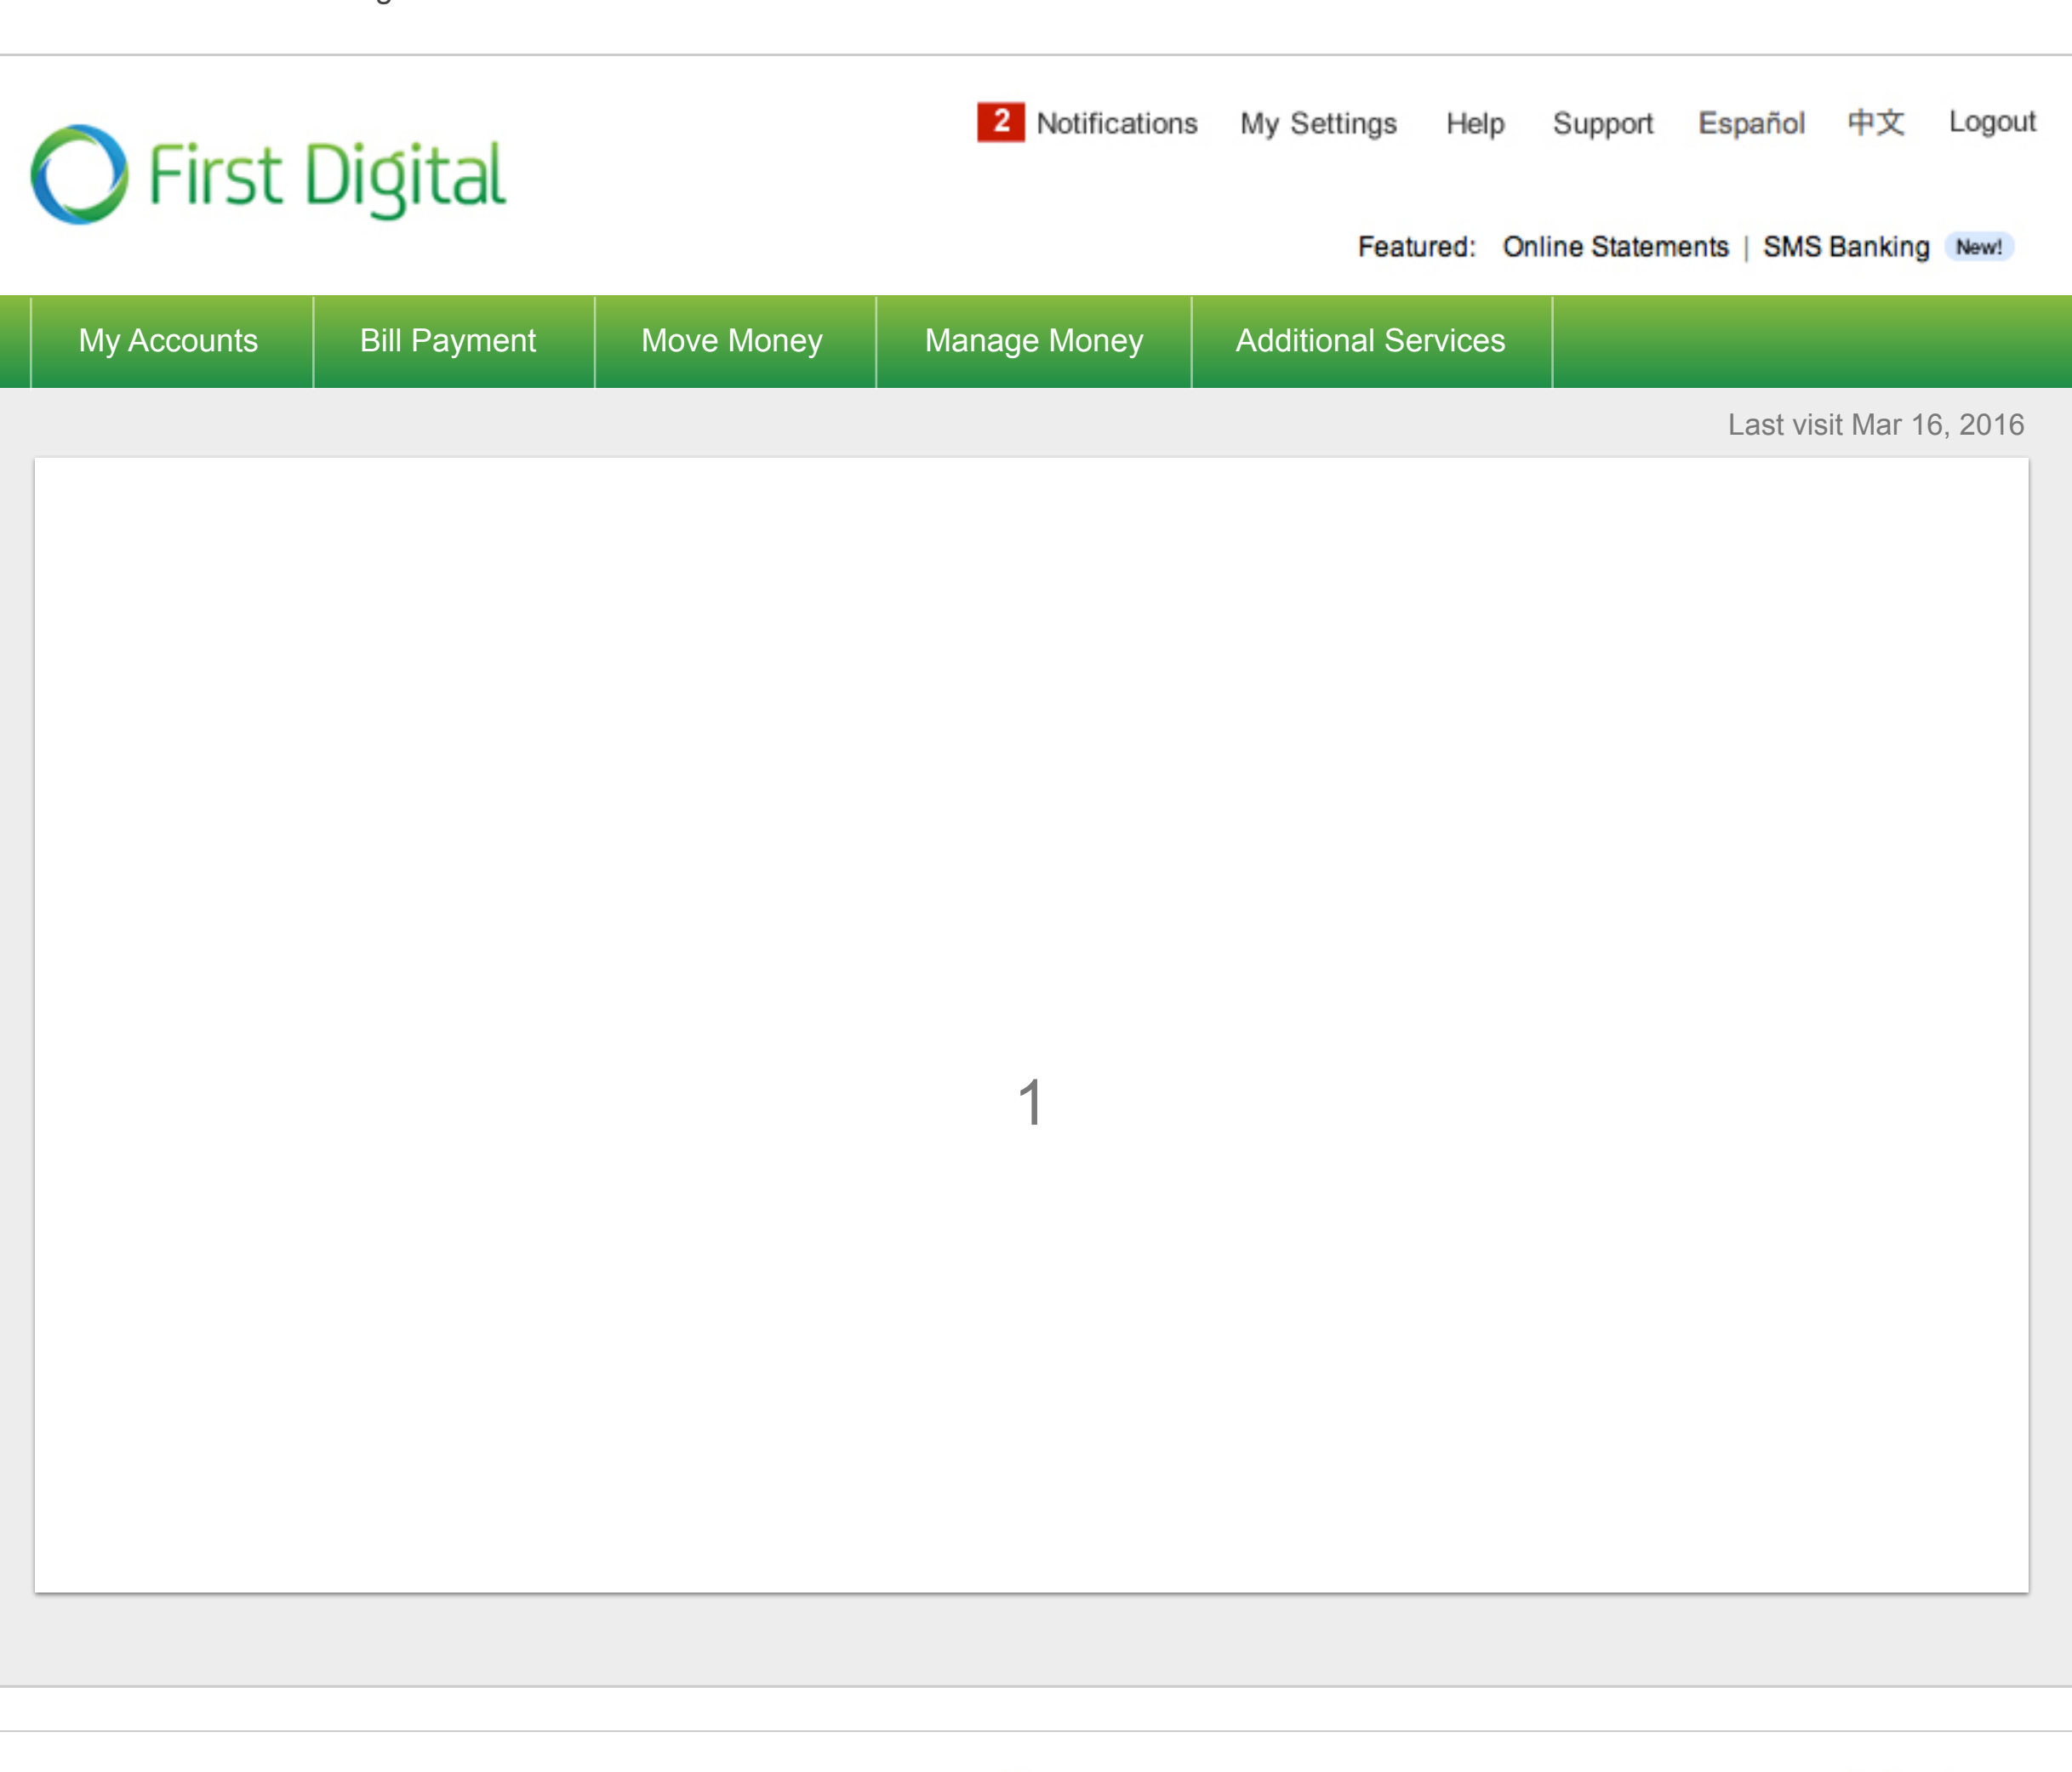

### Desktop Structure (L)

We have 3 types of common layout for Large screen size: 3 columns, 2 columns and 1 column layout.

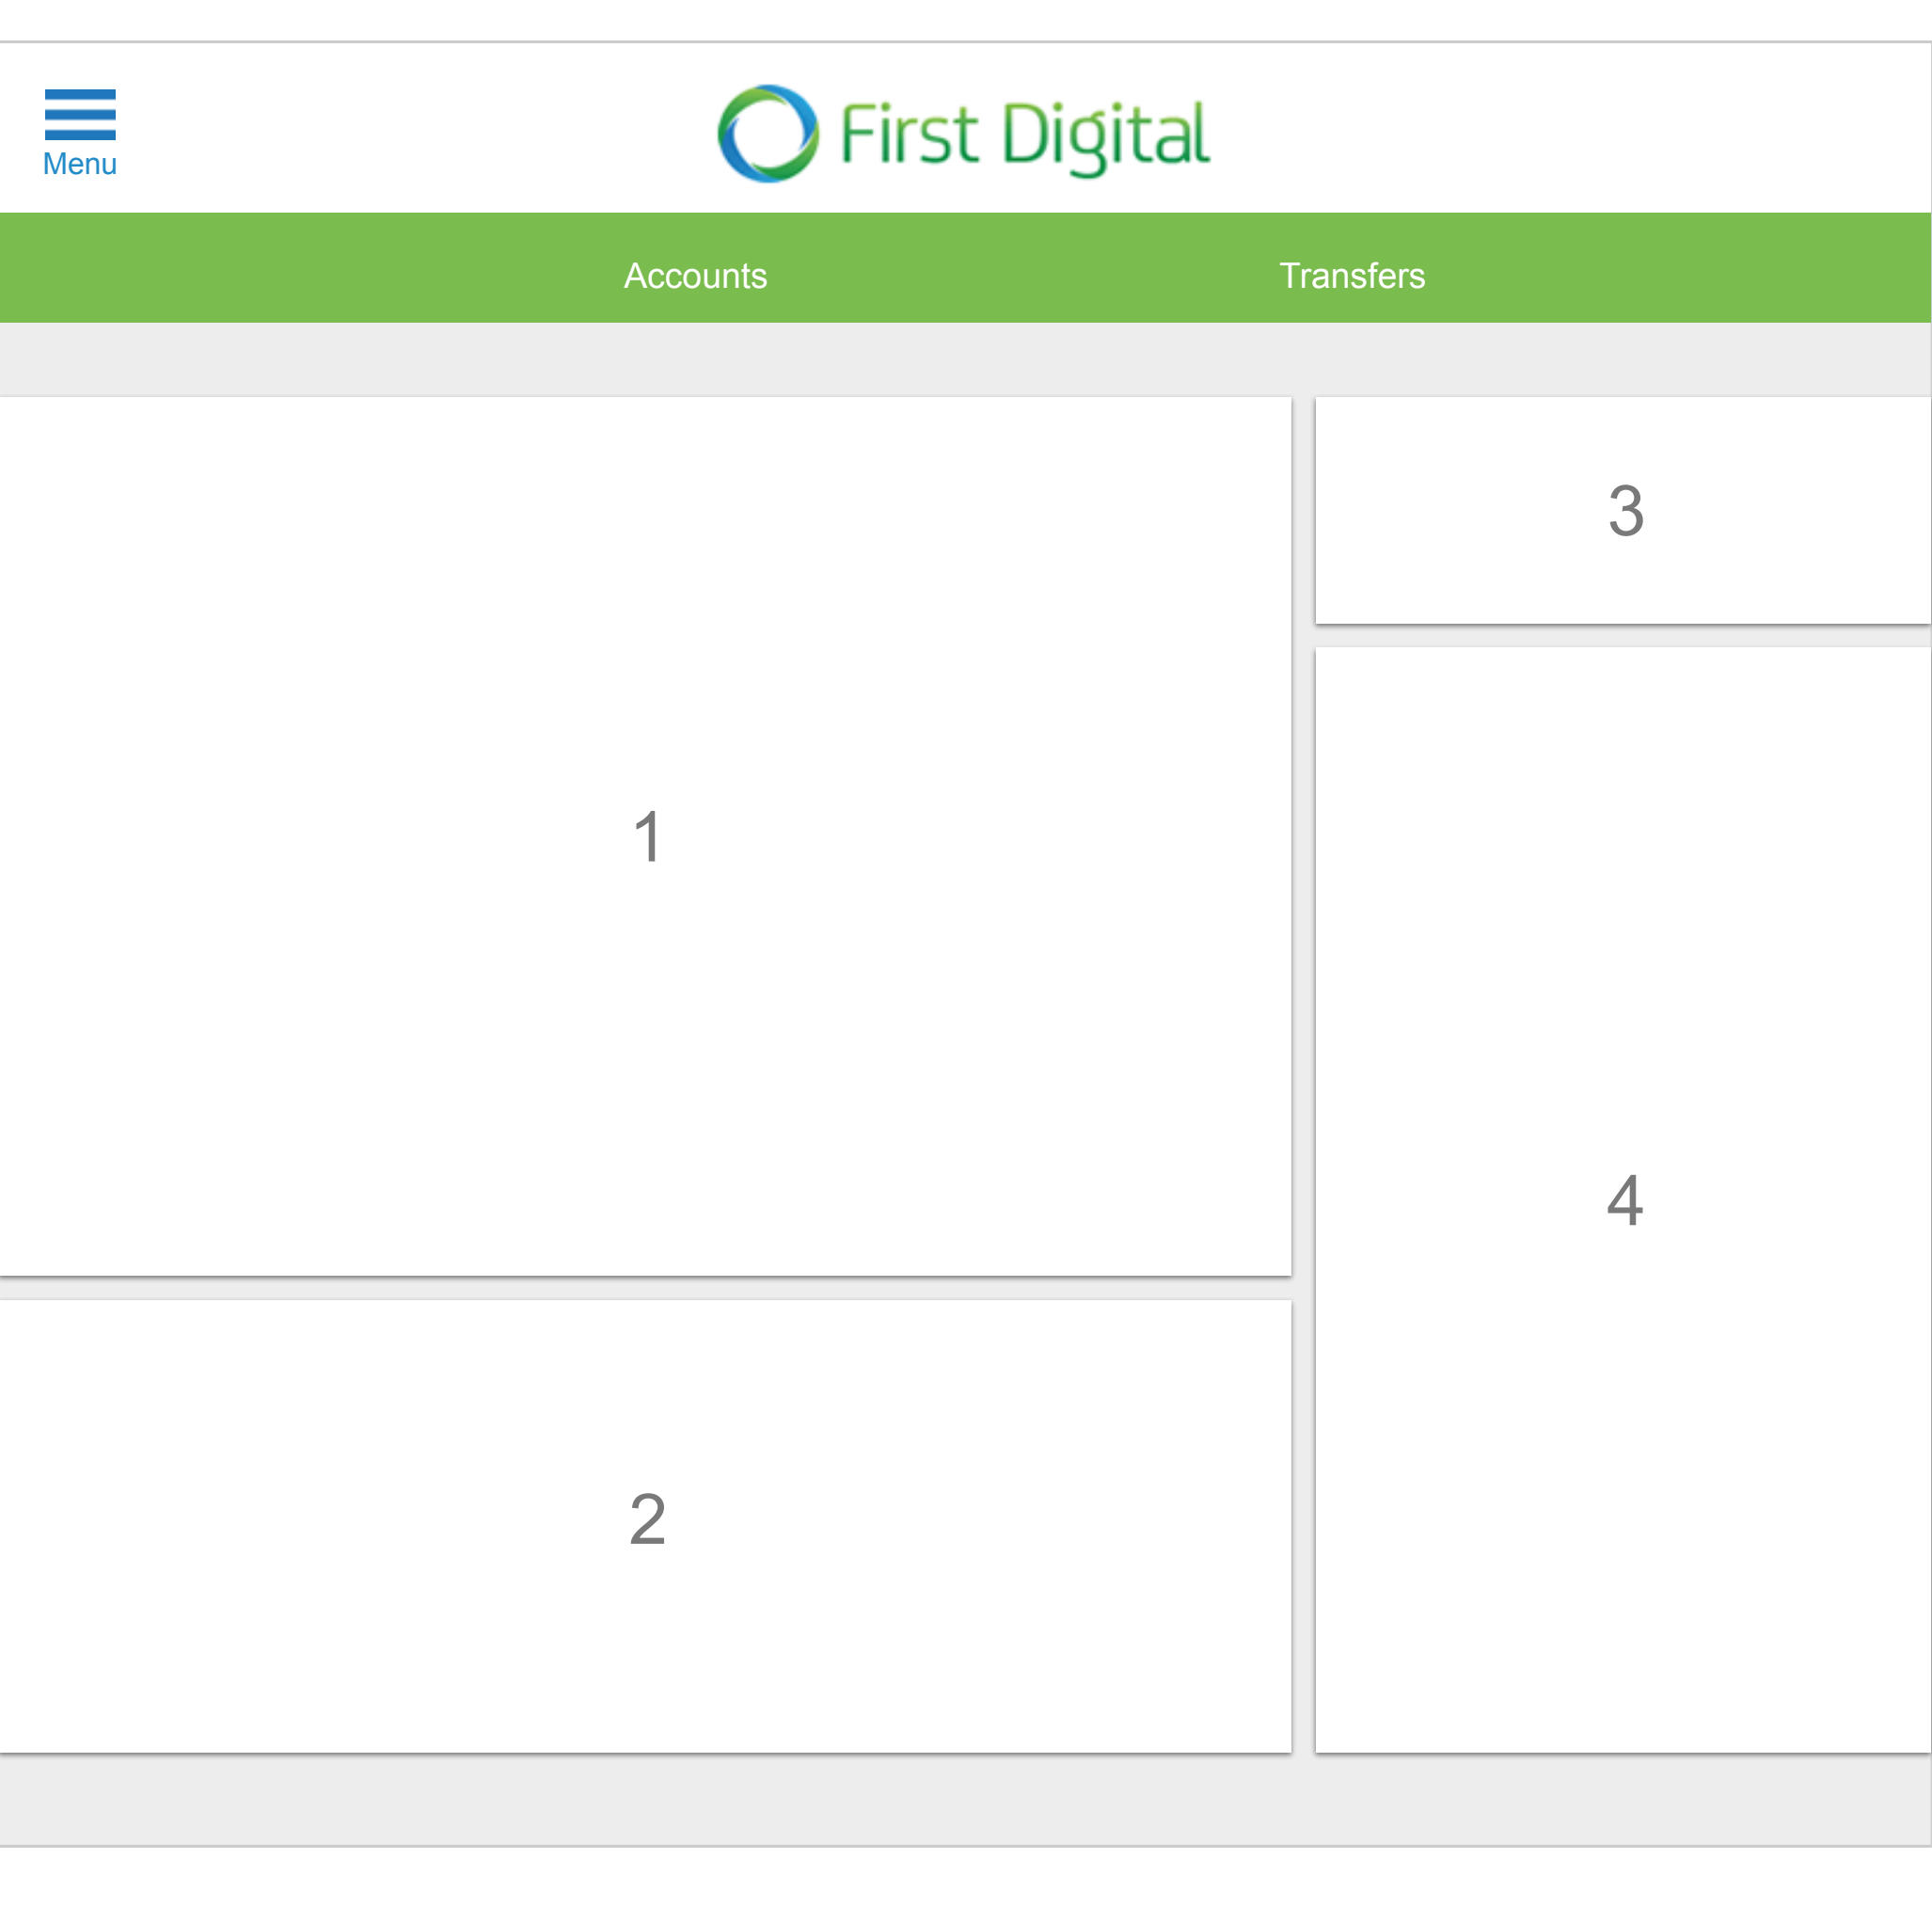

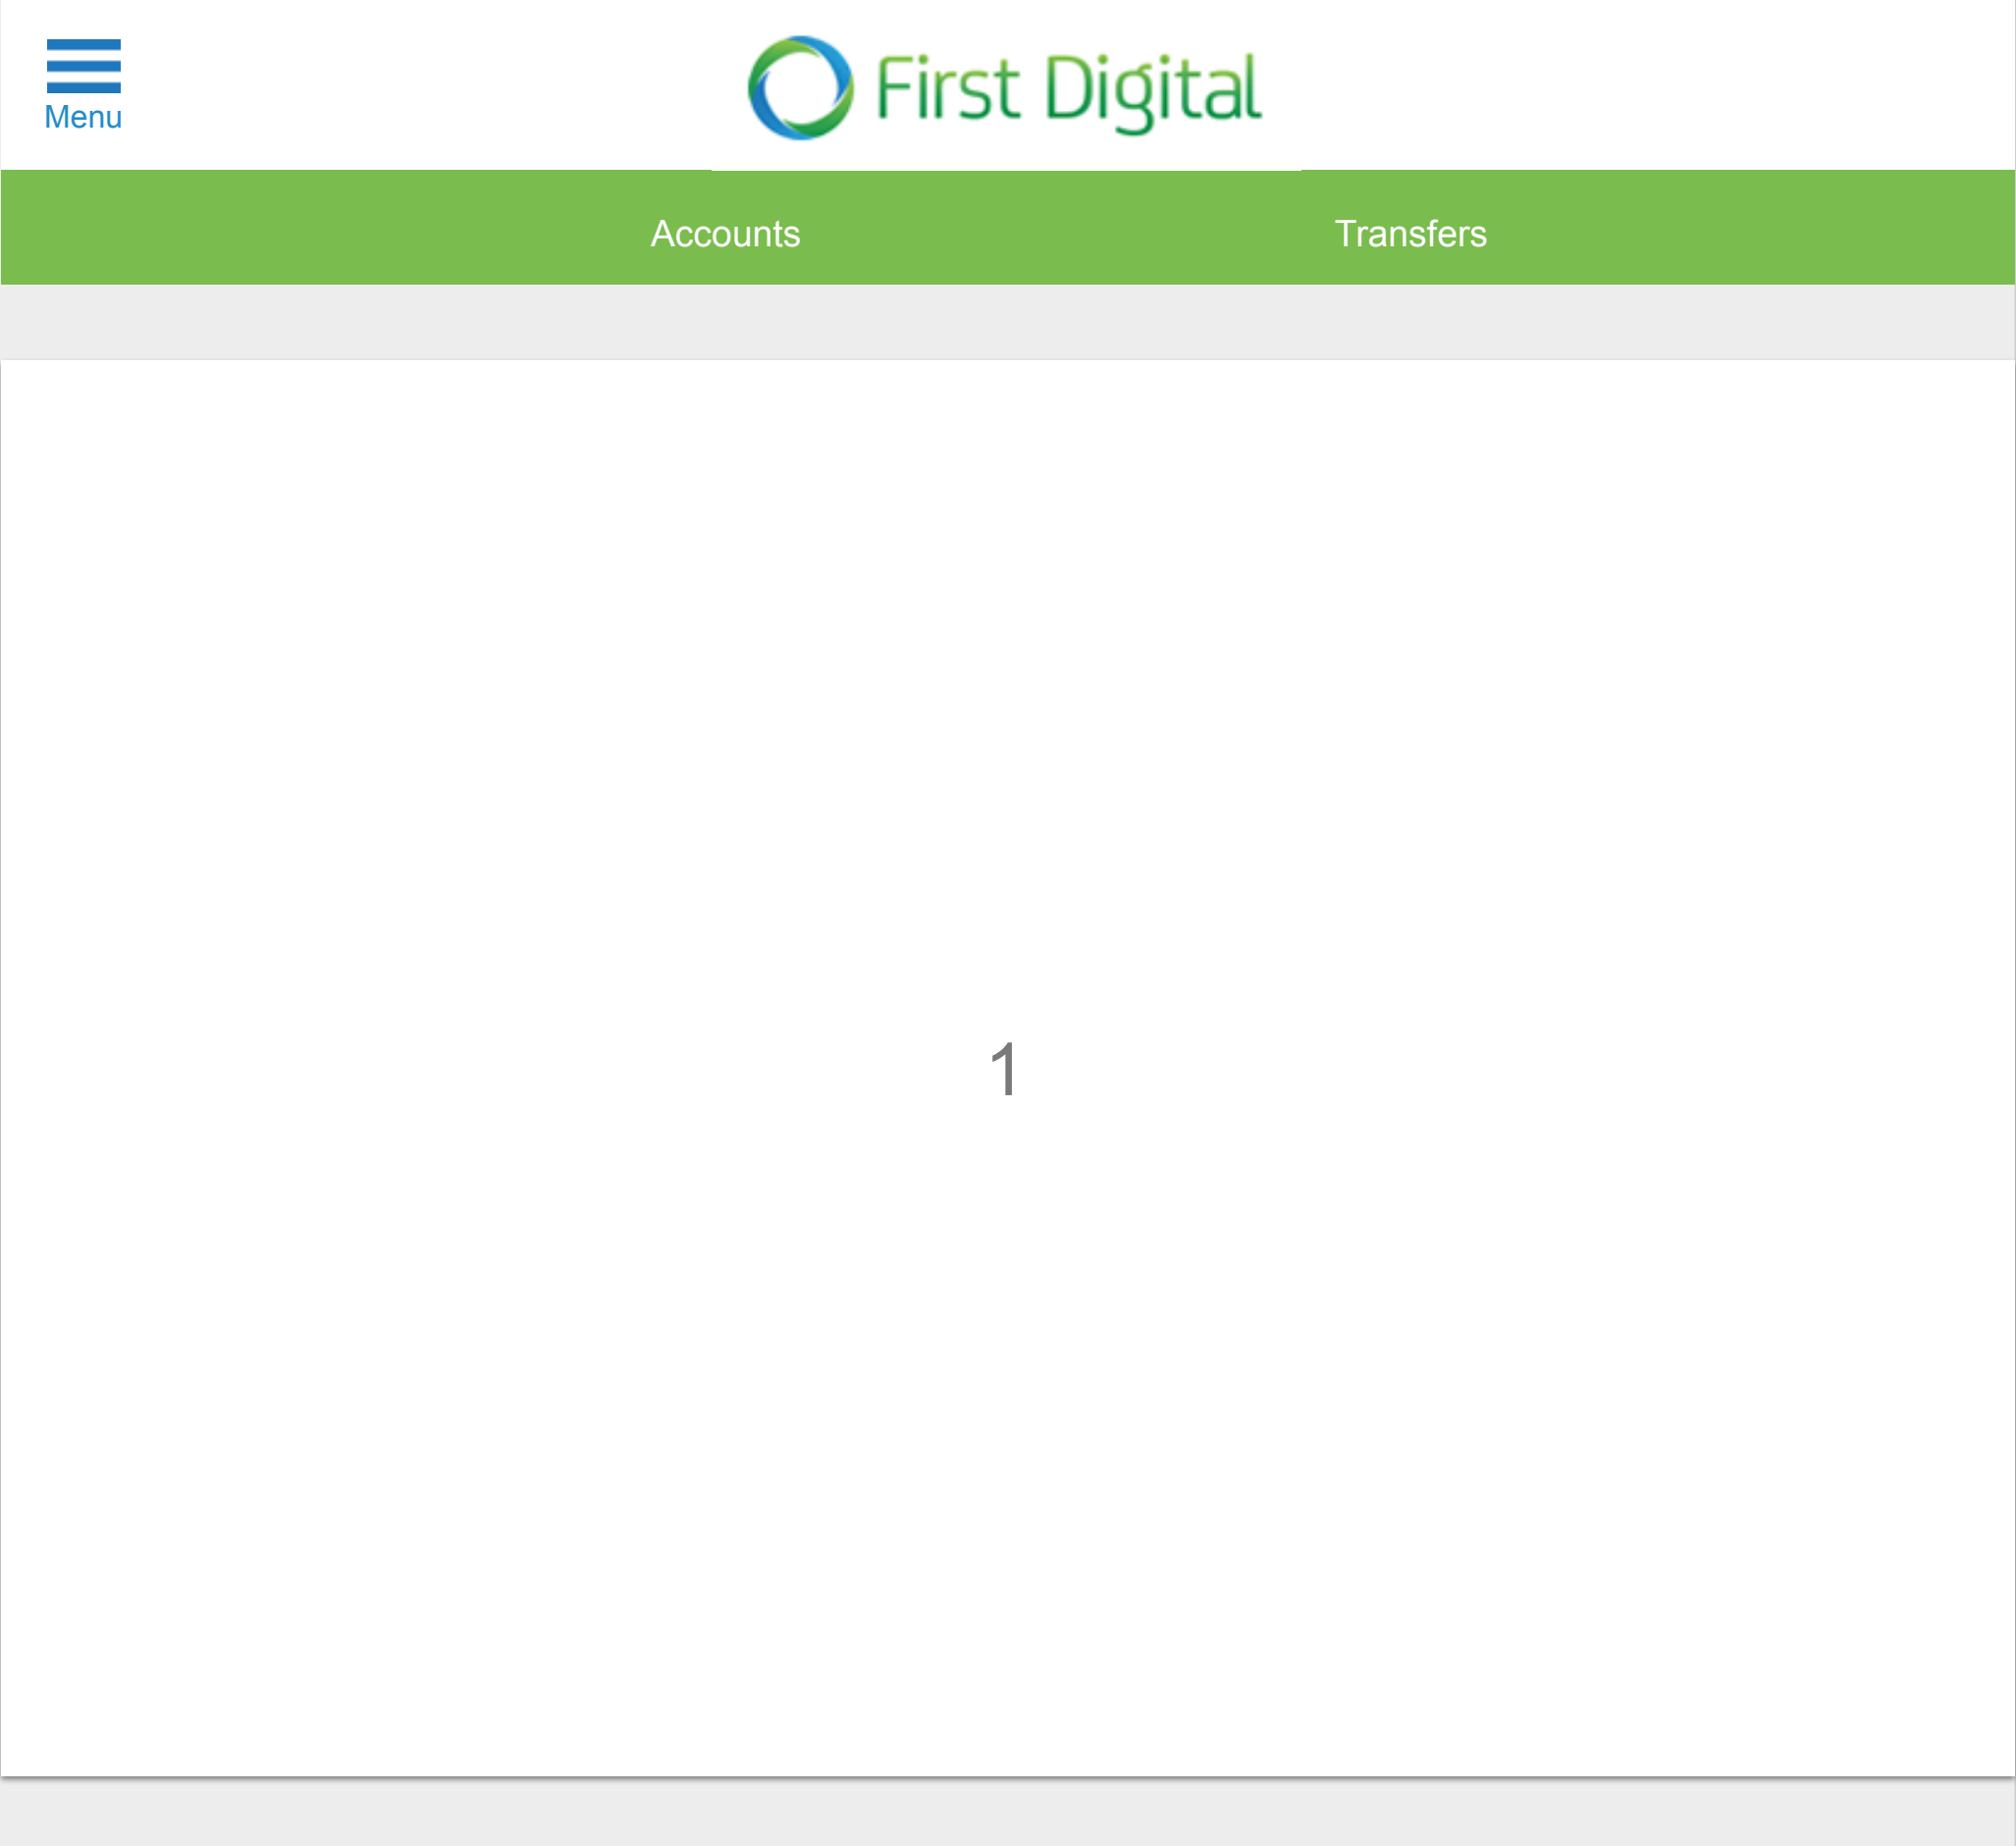

### Desktop Structure (M)

We have 2 types of common layout for Medium screen size: 2 columns and 1 column layout. If there are 3 columns on L, you can either move the widgets from the 3rd columns into the remaining columns or hide those widgets.

### Tablet Structure (S)

At the Small screen size there is 1 or 2 columns. If there are 2 or 3 columns on L & M, you can either move some of the widgets from the others columns into the remaining columns or hide those widgets.

### Mobile Structure (XS)

There is only one column at XS breakpoint. If there are 2 or 3 columns on larger screen sizes, you can either move some of the widgets from the others columns into the remaining columns or hide those widgets.
